

## Lab 6: Project MVP and Mechanics

February 2023

In this lab, you will have access to two projects from two different teams.

The first (Project 1) was done on a startup environment where the focus was on appearance and functionality.

The second project (Project 2) focus was on project structure and organization.

First run Project 1, create a user, create a post and write a comment on it. Then take a screenshot of the feed.

Based on the two implementations answer the following questions (at a technical level, by mentioning function names, calls and elements):

- Can you describe how user authentication and authorization is implemented in each project?
- Can you describe how user posts and comments are implemented in Project 1?
- Can you describe how the search feature is implemented in project 1?
- Can you describe how user photos are uploaded on project 2?
- Can you describe how the MVC architecture was implemented in project 2?

To submit your answers and screenshots, write a lab6.txt file, and add the screenshots to the Lab.6 folder on your repository.
